

NLA INTERNATIONAL

Blue Economy Security

A nation with ocean assets has great wealth. That wealth is precious and vulnerable. As economies grow the need to protect natural assets and understand human activity at sea grows too.

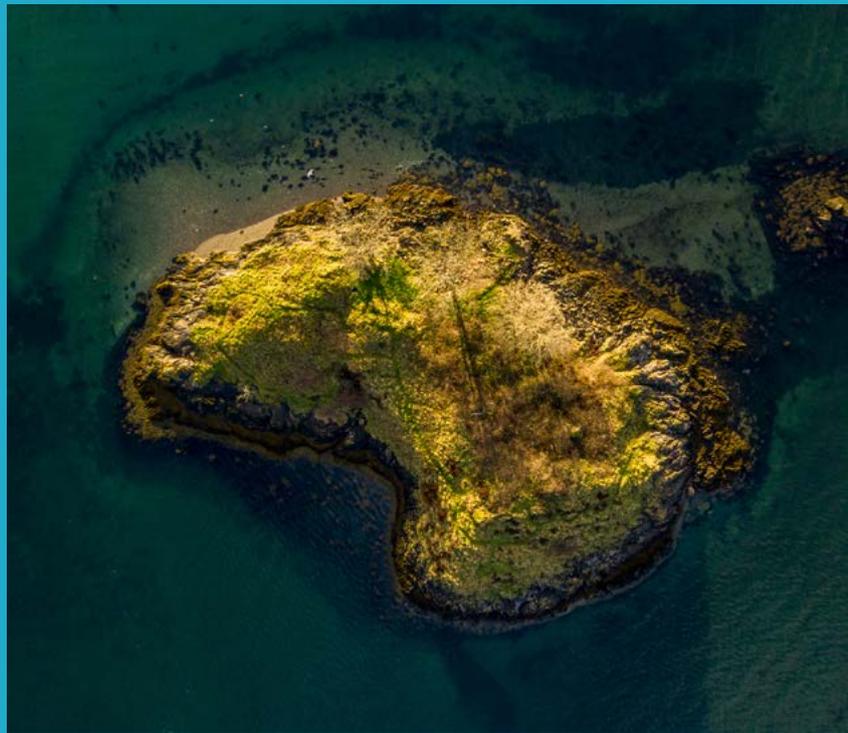

Our team of experts develop situational awareness solutions that bring transparency to marine and maritime activity. Leveraging a depth of experience in intelligence gathering and maritime domain awareness we identify innovative and mainstream sources of data to gather the best possible understanding of activities within a given marine space such as an exclusive economic zone or marine protected area.

The NLA International team pride themselves as being recognised thought leaders in the development and implementation of innovative and cost-effective solutions meaning high quality maritime domain awareness is more affordable and more revealing than ever.

Data comes from established technologies as well as emerging capabilities on earth, on the ocean surface, sub surface and from space-based assets. Our research and development activity means our experts operate at the cutting edge of maritime domain awareness technology and capabilities.

Monitoring activity allows marine spatial planning and provides early warning, actionable insights and trend analysis to enable good governance, enforcement and management of marine and maritime activity and threats as diverse as accidents, spills, maritime crime such as illegal unreported and unregulated (IUU) fishing, piracy, trafficking and smuggling, marine pollution as well as climate and coast change.

NLA International's Blue Economy Security services include:

- Blue Economy threat assessment
- Technology assessment
- Data fusion, analysis and reporting
- Concept of operations production and solution design
- Project implementation
- Capability building and skills transfer
- Optimum governance of natural assets in the EEZ
- Effective IUU fishing control
